GETTING TO REASONABLE
ENSURE YOUR CYBERSECURITY RISK IS ACCEPTABLE

Reasonable Risk Assessment

You've just had a cybersecurity breach. You knew it was coming one day, but didn't know it was going to happen the way it did.

Your security team always ran on a limited budget, and are now insisting they did everything they could do to prevent the breach.

Now, the lawyers and regulators are on their way.

What do you tell them? How do you convince them your controls were reasonable despite the breach? They understand that locking down everything everywhere isn't possible, right?

Learn how an emerging risk assessment method, **CIS RAM**, is bringing business sensibility to the cybersecurity risk equation using the logic of regulators and litigators.

Get Secure. Join Mid-America Club IT Connect on **May 24, 2018** at **6:00 pm** for a presentation from a thought-leader in tech and our spirited Q&A!

*Speaker: Chris Cronin of HALOCK Security Labs, and author of **CIS RAM**, will present how this method works, and how to reduce the risks and liabilities involved in cybersecurity.*

What Judges Will Ask You After Your Breach

Will you be able to answer them?

1. **Was the threat foreseeable?**

2. **Did you consider the harm it could have caused?**

3. **Did the breach victims benefit from your use of their data?**

4. **What benefit did you gain from your use of the data?**

5. **What alternative safeguards would have mitigated the risk?**

6. **Would those alternative safeguards have imposed an undue burden on you?**

7. **How well would these alternative safeguards have reduced the risk of harm?**

8. **Would the proposed safeguards have created other undesirable risks?**

WHAT IS YOUR DEFINITION OF ACCEPTABLE RISK?

Define yours.
